Field of the Invention The present invention relates to a method and apparatus for managing a route of a broadband wireless access system (BWA) in which a wireless local area network (WLAN) radio is connected through an Internet protocol (IP) network, more particularly to a method and apparatus for managing a route of a BWA system in which a BWA cell is composed of a local area network (LAN) and a WLAN. 2. Description of the Related Art The present broadband wireless access system is a subscriber to access network services by providing an Internet access service using a public network connection. On the other hand, the future broadband wireless access system has various application fields, such as a system to corporate network service and an electronic commerce (E-commerce) service, and therefore requires a design that can cope with the demands for high capacity, high service quality, and low price, etc. The broadband wireless access system includes a BWA radio and a broadband network, and a BWA radio, which is defined in IEEE 802.16e, is composed of a remote control unit and a mobile unit (MU), both of which are directly connected to a broadband network. That is, the MU is directly connected to a terminal of the user, and the remote control unit is a management entity to control the operation of the MU. According to the IEEE 802.16 standard, a radio link layer 3 (RL3) function is provided, and a management entity can control the operation of a BWA radio and a BWA network in the radio link layer 3 (RL3) level. According to the wirelessMAN (WMAN) working group of the IEEE 802.1678a9n9c
